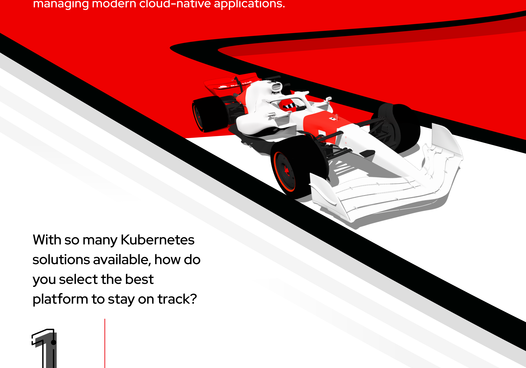
Top 3 considerations to drive the selection of a Kubernetes platform

Get tips on how to choose the best container platform for your business. Learn more about Red Hat® OpenShift®.

Containers and Kubernetes have become the de facto standard for building, delivering, and managing modern cloud-native applications.



With so many Kubernetes solutions available, how do you select the best platform to stay on track?

1 Consider the 3 Ps

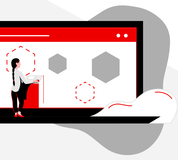
Together, people, practices, and platforms build modern cloud applications.

Your people
Developers
Operations

Their practices
Innovation
Efficiency

One platform

Choose a platform where existing and emerging operating models work together to bring innovation and efficiency to your enterprise.



2 Determine your specialized needs

All Kubernetes-based application platforms provide:

- Containers.
- Kubernetes do-it-yourself (DIY) capabilities.
- Multicloud consistency.

Did you know?

Customers using Red Hat OpenShift for Kubernetes could see a **636%** 5-year return on investment.[1]

Containers need enterprise open source

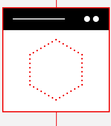
Consider operating systems, key capabilities, and container locations when choosing a platform.

Do you really need to do-it-yourself?

Kubernetes DIY installation, upgrading, and maintenance depends on human power. Do you want to build a cloud applications platform, or do you simply want to run on one?

Built-in support through multicloud consistency

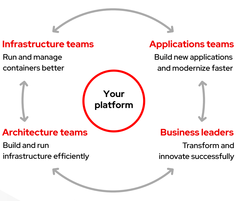
Avoid mix-and-match network impacts. Platform consistency ensures applications run smoothly.



3 Anticipate departmental impacts

Choose the Kubernetes platform that can accelerate all areas of your enterprise.

Understand how platforms influence team dynamics.



Get a roadmap of what Red Hat OpenShift can do for your organization.

Learn how Red Hat OpenShift:

- Provides a complete platform for both traditional and cloud-native applications.
- Allows applications to run anywhere.
- Let's you automate inside and outside your Kubernetes clusters.
- Gives you end-to-end visibility and control of your Kubernetes clusters.

Together, Red Hat and Intel help you build agile, cloud-ready network architectures based on high-performance, industry-standard platforms and open, software-defined infrastructure.
