appian

Appian for Federal Agencies:
Agencies trust Appian's enterprise low-code platform for their most complex mission systems.

- Modernize and transform mission applications
- Leverage IT investments and integrate with legacy systems

- Deploy in the cloud, on-premises, or in a hybrid model
- Infrastructure options include FedRAMP Cloud, AWS, and Azure

The Appian enterprise low-code platform enables organizations to deploy mission-critical applications faster and without coding. Agencies can build secure cloud apps that address their needs—rather than relying on costly, heavily customized packaged applications. The Appian platform offers significant flexibility over traditional solutions because it enables rapid design, development, and deployment of mission and back-office systems.

With Appian, organizations have the power to quickly implement applications that address their specific requirements and integrate with their legacy systems. The platform provides a single view of all relevant information across all systems and data sources, increasing productivity and improving program outcomes.

Acquisition Management

Appian gives agencies the power to modernize every step of federal acquisition management, including requirements management, solicitations, contract writing, administration, and close-out. By improving procurement processes and leveraging current IT investments, the Appian platform transforms agency acquisition systems.

Appian helps organizations improve and standardize their processes for acquisition planning and contract management. Agencies can configure the acquisition planning application to support processes, rules, and interfaces that meet their requirements. Using Appian's business process management (BPM) technology and low-code platform, contract management teams can quickly configure the contract writing application to meet their agency's needs and comply with the Federal Acquisition Regulation (FAR).

Low-Code Acquisition Management Application Examples:

Acquisition Planning	Requirements Management
Contract Writing	Closeout Processing
Purchase Requests	Vendor Management
Contracts Management	Government Purchase Card

Manpower and Personnel Readiness

Appian modernizes and transforms recruiting, on-boarding, training, and other human resource management (HRM) functions. Agencies gain enterprise visibility and control across the hiring, on-boarding, and off-boarding lifecycle while increasing federal HRM, financial, and security audit compliance with complete personnel history. Advanced case management, BPM, and robotic process automation (RPA) drive better decisions, increase productivity, eliminate redundant data entry, and enable agencies to adapt quickly to changing requirements.

- **Modernize** security card request management, guarantee a clear chain of custody, and reduce security breaches
- **Increase** collaboration between investigators and manage adjudication results with configurable background investigation workflows
- **Improve** contractor management with a central system of record for contractor data
- **Protect** personally identifiable information (PII) with advanced security controls
- **Integrate** recruiting data with existing HRM systems for collaboration and transparency

Low-Code Manpower and Personnel Readiness Application Examples:

Employee & Contractor On-Boarding	Background Investigations
Employee & Contractor Off-Boarding	Security Clearance Management
Talent Management	Recruiting
Training Delivery Management	Workforce Management

Regulatory and Compliance

For managing complex cases and processes, the Appian platform delivers an enterprise-wide view of information that boosts collaboration and increases productivity. All data gathered during the regulatory process is stored within the application and accessible through Appian Records. With a low-code development platform, federal programs can respond quickly to legislative, regulatory, and policy changes.

The investigative case management application enables agencies to oversee investigations from the office and field. The platform allows agencies to combine data from multiple systems, sources, and workflows into a single view of the investigation with full audit traceability. Appian's mobile capabilities provide field investigators, inspectors and auditors with the same functionality available to desktop users.

Low-Code Regulatory and Compliance Application Examples:

Regulatory Submission Management	Investigative Case Management
Field and Site Inspections	Background Investigations
Workplace Safety Compliance	Entity, System, and Process Audits
Project/Portfolio Management	Financial Audits

Constituent Services

With Appian Constituent Services applications, staff can define their own business workflows in real-time. This streamlines processing for a wide variety of cases, documents, correspondence, and forms for review, approval, and sign-off. The Appian platform modernizes and transforms grants management systems, including grant application, award, Financial Reporting (FFR), Progress Reporting (PPR), audit, and close-out.

The Appian Intelligent Contact Center™ (ICC) empowers agencies to deliver integrated constituent services across channels and touchpoints, improving responsiveness. ICC increases agent productivity, streamlines interactions, and reduces transaction processing time with dynamic case management, artificial intelligence (AI), and RPA.

Low-Code Constituent Services Application Examples:

Grants Management	Intelligent Contact Center
Constituent Case Management	Eligibility and Enrollment
Correspondence Management	Permitting and Licensing
Claims Processing	Self Service Solutions

Leading Organizations Trust Appian:

appian

Appian provides a low-code automation platform that accelerates the creation of high-impact business applications. Many of the world's largest organizations use Appian solutions to improve customer experience, achieve operational excellence, and simplify global risk management and compliance.
